Subject here are the Weyerhaeuser notices for spraying

1 attachment

Lane-CohoStreams.pdf

Hi Chad,

Thank you for sharing your report with us.

Here are the notices for the Weyerhaeuser planned herbicide aerial and ground spraying in Triangle Lake/Highway 36 area which I mentioned:

[Massive Ground spray by Weyerhaeuser in Western Lane - 2010-781-00639](#)
[Maps and written plans for Weyerhaeuser ground spray -2010-781-00639](#)

[Weyerhaeuser Aerial spray in Western Lane -2010-781-00642](#)
[Maps and written plans for Weyerhaeuser aerial spray -2010-781-00642](#)

See pages 7 and of 8/10 in the aerial notice (2010-781-00642) with maps for that notice on pages 11 through 14/18 with the maps and written plans.

Weyerhaeuser is logging right now (saw this yesterday while driving past Triangle Lake) and I will get pictures of this logging right above the Boy Scout Camp in the next few days. This is the unit that is scheduled for aerial spraying starting as early as July 27th (units 6 and 7 of 9 on the notice).

I also would like to correct the spelling of Cogden Creek in your presentation. The spelling is Congdon Creek, and this is important because it is one of the prime Coastal Coho salmon spawning streams named in the maps developed by Oregon Department of Agriculture in response to Washington Toxics, et al v EPA requiring a 60 foot buffer for ground spraying around named salmon streams and a 300 foot buffer for aerial spraying next to named salmon streams when applying triclopyr ester herbicides (brand names such as Garlon 4).

Please see attached list of named streams requiring buffering.

Weyerhaeuser is planning to spraying within 10 feet for ground and 60 feet for aerial spraying using Garlon 4 as indicated in these two notices next to Congdon, Conrad, Fish, Lake, Siuslaw, etc. which are all named Coast Coho salmon critical habitat streams.

Please look into these violations of the Court Order in Washington Toxics v. EPA.

Also I just wanted to clarify that my husband lead the tour of Congdon Creek in my place because the Oregon Department of Transportation was spraying Highway 36 two days before and also the day of the tour which prohibited me from attending the tour. His name is Gary Hale (not Wroncy, as is mine). Gary did video tape parts of the tour and also Stu Turner's presentation which I will send to you very soon.

I would be glad to provide you with contacts or information on the Weyerhaeuser spray, the violations of Washington Toxics salmon stream buffers, and any other matters you may wish to have clarified.

We will also provide you with the complete computer records of all forestry (logging, road building, herbicide spraying, fertilizing, slash burning, etc.) operations on private and state lands within Oregon from 1990 - to 2010. We acquired these records from the Oregon Department of Forestry. One can query the data for specific parameters, thus you can see easily that many units get sprayed many more times than the claimed 2-3 times, and over periods longer than 1-2 years. Also that timber companies log many units in a watershed (and airsheds) over time so that a person living in a specific watershed gets pummeled year after year by the sprays.

Here are some queries we have done for acreages of herbicide spraying with this data:

<http://www.forestlanddwellers.org/SprayAcreage/>

Thanks again for you work on this matter.
